

HÄRLE UV LED STERILIZER BAG

NO RADIATION * NO OZONE * NO RESIDUE

Powered by 12 x UV LED, it disinfects and eliminates up to 99.9% of germs, viruses and bacteria. UV LED reproduces the UV light using LED beads, a 100% clean and efficient technology.

Use our UV Sterilizer Bag for LED disinfection for mobile phones, eyeglasses, baby bottles, make-up brushes, toiletries, clothing, keys, eating utensils, and more.

It can also be used for disinfection of Non-contact IR Thermometers and surgical masks. To ease the insufficient supply of masks*, it can be reused by sterilization.

** Disposable masks are still recommended to be replaced often or when they get moist.*

SAFETY DESIGN

It has a built-in safety aluminum film that will not leak ultraviolet rays. Once the lid is closed during the disinfection process, the ultraviolet lamp will stop working immediately to ensure that it will not cause harm to the human body.

One-touch operation and a 360-degree disinfection

With 12 LED germicidal lamps

Security lanyard: An optional security string can be installed upon request.
